

Trustees Report to Church Council
10-12-16

The Trustees have had an Active fall. We are working towards removing the boiler from heating the education wing and converting to 100% forced air heat and cool for the 2nd and 3rd floors. In September we replaced 2 roof top units which were malfunctioning. The Removal of the boiler zone will leave NO heat in the Parlor or Old Office Space (The hallway and restrooms will still be heated) pending renovation. The office is aware, and does not schedule any groups in those rooms. This will save several thousand dollars by not having to re-insulate the steam pipes after the asbestos insulation was removed last spring.

We have a tentative plan for room 102 to get it into a usable condition after the asbestos floor was removed leaving it uneven, that should be completed by the end of the year pending volunteer availability.

We have also been doing small repair projects around the building. If you notice something that needs attention, please let the office know so that a Ticket can be created.

Respectfully Submitted,
Nate Burke
President of Trustees
